

Invoice Verification Service

Invoice Verification Service is a web-based application enabling auditors and the general public (customers) to perform a quick check of the authenticity of each invoice. It uses the invoice's internal data to verify its integrity and authenticity.

When the Invoice Verification Service finishes with the verification, it displays the invoice status (public invoice validation tags) on the [Invoice Verification Page](#).

As part of the verification, the customer/auditor receives either the **Invoice is verified** or **Invoice is invalid** message. It describes the invoice's validity status.

General information

A fiscal invoice must provide an option to immediately check its regularity (i.e. whether it was generated by an official, certified Electronic Fiscal Device). Options for checking invoice authenticity:

- scan the QR code on the invoice
- click on the verification URL in the electronic invoice

The action of using the Invoice Verification Service also automatically submits information about that invoice to the TIMS system. This means that the system will receive all important data about that invoice even if it was issued in the offline mode and is still not submitted by the taxpayer's [E-SDC](#).

1. [Customer Compliance Awards Program](#)
To encourage the general public (customers) participation in fiscalization, TaxCore offers the Customer

Compliance Award (CCA) program. Every fiscal invoice issued by an accredited [EFD](#) system enables customers to immediately check its validity (usually by scanning a [QR code](#)).

2.

[TaxCore Invoice Verification Page](#)

The TaxCore Invoice Verification Page displays the invoice status for invoices processed by the Invoice Verification Service. It is the landing page for auditors and the general public who wish to verify the integrity and authenticity of any invoice.
